Amendments to the Specification:

Please replace the paragraph beginning on page 15, line 25, with the following rewritten paragraph:

As described above, the white-light reconstruction holographic recording region is formed to be 2 μ m to 80 μ m thick, and the Fourier holographic recording region in which data are recorded recording is formed to be greater than or equal to 100 μ m thick, thereby obtaining a holographic recording medium that is abundantly decorative and capable of storing a larger amount of data.
